SUMMARY

Computer Science graduate (GPA 3.48/4.00) working across data analysis, machine learning, and AI. My work with real datasets spans analysis and visualization through predictive modeling and deep learning, mostly in Python, SQL, Excel, Power BI, and PyTorch.

EDUCATION

Bachelor of Computer Science — Umm Al-Qura University, College of Computers
GPA 3.48 out of 4.00

08/2022 – 06/2026
Makkah, Saudi Arabia

EXPERIENCE

Deanship of Information Technology — Cooperative Training

03/2025 – 08/2025
Makkah, Saudi Arabia

- Built a Power BI dashboard analyzing student withdrawal patterns across majors and colleges.
- Led a team of trainees developing a Device Management App covering device registration, device review, and task handling.
- Wrote the Software Requirements Specification (SRS) and presented the project to Deanship leadership.
- Documented 200+ computer devices across university labs and colleges.

PROJECTS

Telecom Customer Churn Analysis — Power BI & Machine Learning

[View Project](#)

- Analyzed 7,043 telecom customer records with a 26.5% churn rate in Excel, examining attrition across contract type, internet service, payment method, and tenure.
- Built a three-page Power BI dashboard using DAX measures and calculated columns to break churn down across those four dimensions.
- Trained and evaluated a logistic regression baseline, reaching 0.849 ROC-AUC and 78% recall on churners.

Pulmonary Edema Detector — Computer Vision Project

[View Project](#)

- Developed and evaluated a deep learning pipeline for pulmonary edema classification using 10,803 chest X-ray images.
- Compared DenseNet121, EfficientNet-B0, ResNet50, and ConvNeXt-Tiny on the held-out test set.
- Applied Grad-CAM to visualize the image regions driving each prediction and deployed the classification application as a Streamlit interface.

Faten — Graduation Project

[View Project](#)

- Developed an AI-powered academic assistant integrating five student modules: AI chat, GPA tools, study planning, dashboard, and profile management.
- Built the FastAPI backend and integrated Firebase for storing and retrieving student data, connecting the AI chat to each user's academic information.

CERTIFICATES

Artificial Intelligence Program — KAUST Academy
Python Data Fundamentals — DataCamp

Data Analytics Bootcamp — ATHAR Academy
Fundamentals of Artificial Intelligence — SDAIA

SKILLS

Technical Python · SQL · Power BI · Excel · Data Analysis · ML & DL · Scikit-learn · PyTorch · Pandas · Matplotlib · Git & GitHub
Soft Problem Solving · Leadership · Communication · Adaptability · Collaboration · Fast Learning
